

PRE-SEED · 2026

Mizan

Know what's in your food
before you order.

A food delivery app for the UAE that ranks meals by
what's in them — not by ads.

hello@mizan.market · Dubai, UAE

PROBLEM

You don't know what's in your food — or what to do about it.

01 Nobody knows it. Restaurant nutrition is genuinely hard to pin down — recipes, portions and prep all vary. Apps don't have the data, so you can't either.

02 Knowing isn't enough. Even with the numbers in hand, most people don't know what their body needs — 40g of protein means nothing without a goal to measure it against.

What a delivery app shows — and everything it doesn't.

SOLUTION

Mizan adjusts the delivery feed to what your body needs.

Launch starts with nutrition labels and filters. Personal ranking deepens as the profile layer rolls out.

PRODUCT

Every dish carries its nutrition label.

Meals are ranked by nutritional fit. Macros, key micronutrients and allergens sit on the dish page — in the main flow, not behind a tap.

Actual app UI.

HOW IT WORKS

Any menu in. A trusted nutrition label out.

A RESTAURANT MENU

- Grilled salmon bowl
- Teriyaki chicken
- Quinoa tabbouleh

AED 52
AED 44
AED 38

Names and prices — nothing about what's inside.

MIZAN

Grilled salmon bowl

High confidence

PROTEIN

38 g

CARBS

44 g

FAT

19 g

Sodium 420 mg · Fiber 9 g · Iron 15% · **Contains fish.**
Prepared near nuts.

If we're not sure, we don't show it

Every label carries a confidence score. Below threshold, the panel is hidden — never guessed.

Allergens are held to a stricter bar

A separate pipeline, with disclaimers in the primary text flow — never behind an icon.

Labels improve with use

Restaurant validation and order history sharpen every dish over time.

WHY NOW

The market is ready for nutrition-first ordering.

01**Consumers track their health**

Wearables, calorie apps, GLP-1 and preventive care have made people fluent in their own numbers.

02**Restaurants need an edge**

Beyond discounting, nutrition transparency is a way to stand out and reach a higher-value diner.

03**AI makes it scalable**

Structuring a whole marketplace of messy menus into reliable nutrition is now feasible in cost and accuracy.

MARKET

A multi-billion-dollar market, still nutrition-blind.

The UAE is one of the world's densest delivery markets — and no major platform ranks food by what's in it.

USD 2.5B

UAE online food delivery spend, 2024

USD 4B

projected by 2030 — growing ~7% a year

13,000+

restaurants and cafés in Dubai alone — our launch city

3 of 4

delivery orders run through a single promotions-led platform

Independent market estimates — *Grand View Research and Syrve MENA, 2025* — not Mizan projections.

WHERE THIS GOES

From nutrition labels to your own numbers.

LAUNCH

Nutrition on every dish

Labels, filters and fit-based ranking across the marketplace — what the raise delivers.

NEXT

A longitudinal nutrition log

Every order adds to a record of what you actually eat — a dataset no other delivery app has.

LATER

Bloodwork-integrated ranking

Link a blood test, and the same ranking engine tunes to your own markers — iron, B12, sodium. Separately financed, built on the launch data asset.

THE ASK

USD 750k

~AED 2.75M · 12-month runway

Covers our modelled year-one cash need — building the app in-house and running it through a Dubai-wide launch to first orders.

USE OF FUNDS

55% Build & engineering

25% Launch ops, restaurants & legal

20% Reserve & contingency

ROADMAP — THE 12 MONTHS

MONTHS 1-3

Build → launch

V0 app and the nutrition-label pipeline, live in Dubai by month 3.

MONTHS 4-8

Grow the marketplace

More restaurants signed; 1,000+ dishes carrying verified nutrition labels.

MONTHS 9-12

Prove it

Order and repeat-use data — the proof for a seed round. Abu Dhabi next.

Commercial metrics follow the first sold unit — we'll report them when they're real, not modelled.
