

PRE-SEED · 2026

Mizan

Know what's in your food
before you order.

A food delivery app for the UAE that ranks meals by
what's in them, not by ads.

hello@mizan.market · Dubai, UAE

PROBLEM

You don't know what's in your food, or what to do about it.

- 01 Nobody knows it.** Restaurant nutrition is genuinely hard to pin down: recipes, portions and prep all vary. Apps don't have the data, so you can't either.
- 02 Knowing isn't enough.** Even with the numbers in hand, most people don't know what their body needs. 40g of protein means nothing without a goal to measure it against.

What a delivery app shows, and everything it doesn't.

SOLUTION

Mizan adjusts the delivery feed to what your body needs.

Launch starts with nutrition labels and filters. Personal ranking follows as the profile layer rolls out.

PRODUCT

Every dish carries its nutrition label.

Meals are ranked by nutritional fit. Macros, key micronutrients and allergens sit on the dish page, in the main flow rather than behind a tap.

HOW IT WORKS

Any menu in. A trusted nutrition label out.

A REAL MENU · TASHAS, DUBAI

Upper East salmon bagel AED 88
Chicken brown rice AED 92
Chopped house salad AED 80

Names and prices, with nothing about what's inside.

MIZAN

Upper East salmon bagel

Mizan estimate

PROTEIN

32 g

CARBS

70 g

FAT

33 g

Sodium 1,140 mg · Omega-3 1.4 g · Vit B12 60% · **Contains fish, dairy, gluten.**

If we're not sure, we don't show it

Every label carries a confidence score. If it falls below the bar, we hide the panel rather than guess.

Allergens are held to a stricter bar

Allergens run through a separate pipeline, and disclaimers sit in the main text, not behind an icon.

Labels improve with use

Restaurant validation and order history sharpen every dish over time.

WHY NOW

The market is ready for nutrition-first ordering.

01**Consumers track their health**

Wearables, calorie apps, GLP-1 and preventive care have made people fluent in their own numbers.

02**Restaurants need an edge**

Beyond discounting, nutrition transparency is a way to stand out and reach a higher-value diner.

03**AI makes it scalable**

Turning thousands of messy menus into reliable nutrition data is finally cheap and accurate enough to do for a whole marketplace.

MARKET

A multi-billion-dollar market, still nutrition-blind.

The UAE is one of the world's densest delivery markets, and no major platform ranks food by what's in it.

USD 2.5B

UAE online food delivery spend, 2024

USD 4B

projected by 2030, growing about 7% a year

13,000+

restaurants and cafés in Dubai, our launch city

3 of 4

delivery orders run through a single promotions-led platform

Independent estimates (*Grand View Research and Syryve MENA, 2025*), not Mizan projections.

WHERE THIS GOES

From nutrition labels to your own numbers.

LAUNCH

Nutrition on every dish

Labels, filters and fit-based ranking across the marketplace. This is what the raise delivers.

NEXT

A longitudinal nutrition log

Every order adds to a record of what you actually eat. No other delivery app has that dataset.

LATER

Bloodwork-integrated ranking

Link a blood test and the same ranking engine tunes to your own markers: iron, B12, sodium. This layer is financed separately and builds on the launch data.

THE ASK

USD 750k

~AED 2.75M · 12-month runway

Covers our modelled year-one cash need: building the app in-house and running it through a Dubai-wide launch to first orders.

USE OF FUNDS

● **55%** Build & engineering

● **25%** Launch ops, restaurants & legal

● **20%** Reserve & contingency

ROADMAP · THE FIRST 12 MONTHS

● **MONTHS 1-3**

Build → launch

V0 app and the nutrition-label pipeline, live in Dubai by month 3.

● **MONTHS 4-8**

Grow the marketplace

More restaurants signed; 1,000+ dishes carrying verified nutrition labels.

● **MONTHS 9-12**

Prove it

Order and repeat-use data, the proof we need for a seed round. Abu Dhabi next.

Commercial metrics start with the first sold unit. We'll report them when they're real, not modelled.
